

**State Project No. 713-37-0126
Caples Road Bridge Over Longs Creek
Ouachita Parish
(Estimated Construction Cost: \$478,173.60)**

The existing structure is structurally deficient with a load posting of 10-15 tons. The structure serves many residences that use it to access LA 34 and is a potential school bus route; considerable savings to the school board can be generated in less fuel and wear and tear on school equipment when using the route.

The construction of this project will assist your smaller contractors in meeting their equipment loans and payroll overhead costs.
